The Missing Persons Mobile Application allows police to instantaneously post descriptive profiles along with photos of individuals who have been reported missing. The primary purpose of the system is to increase the visibility and awareness of those missing. Updates can be entered and viewed instantaneously via the web-based interface or the Missing Persons Mobile Application.

- Add new missing persons cases
- Add physical and circumstantial details, photographs, contacts and other critical pieces of information to a case
- Track multiple cases as information is added to the system

The Missing Persons Mobile Application is designed to assist law enforcement in the process of tracking missing people. The application allows an officer in the field to submit a missing person case into the police department's Missing Persons database. Allowing officers to create, update, and search for cases using a mobile application will ultimately decrease the time to find missing persons. This application allows an officer to search through current cases, update existing cases and create new cases while working remotely.
